THE PROBLEM

THE PROBLEM

Tens of thousands of tokens launch daily on Solana - far too many for manual research or due diligence.

Over 99% of new tokens are rugs, scams, or liquidity traps.

Markets move fast—especially on Solana - making it impossible to keep up without automation.

Existing bots and AI platforms are expensive, complex, and built for coders - not everyday traders.

INTRODUCING...

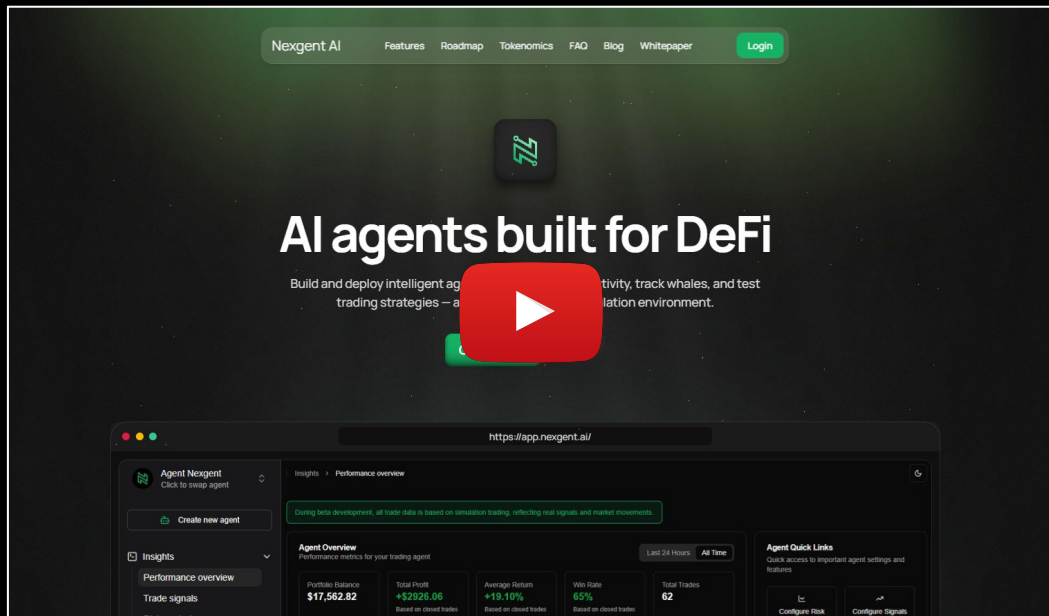

NEXGENT.AI

Hindsight today

VIDEO WALKTHROUGH

Find on youtube at <https://youtu.be/gtjoVwqrSGs>

THE NEXGENT PLATFORM

Real-Time Intelligence

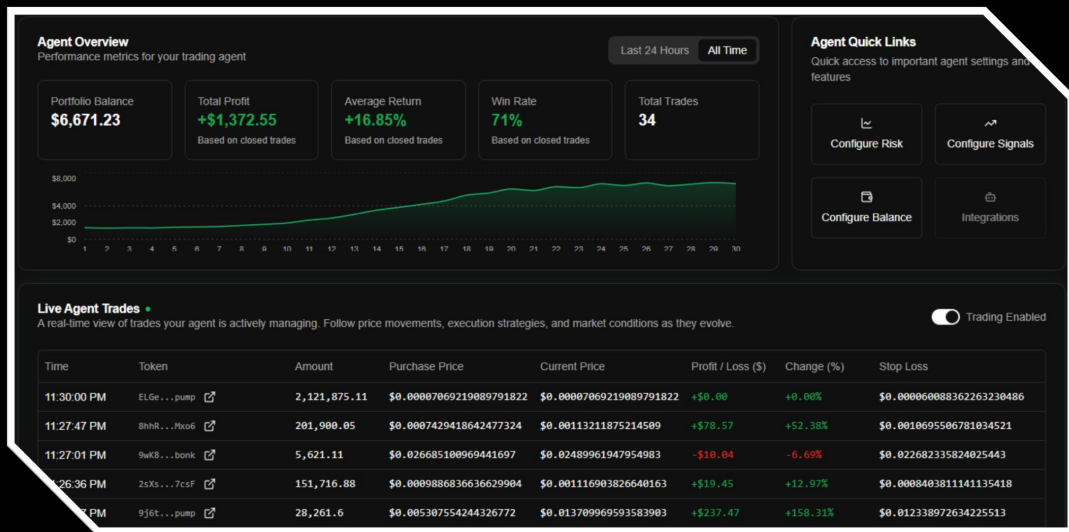

- Monitors over **75 million transactions daily** across Solana to detect threats, trends, and opportunities as they emerge.

Customizable AI Agents

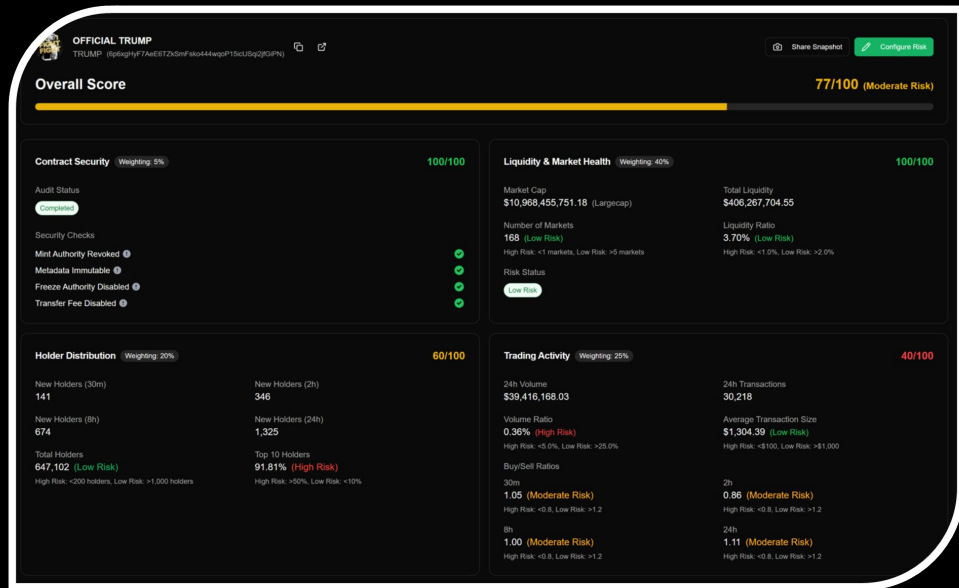

- Build agents that match your trading profile, no code needed — to **surface and act on signals 24/7**.

Safe Strategy Simulation

- Test and refine trading strategies in a controlled off-chain environment **without risking capital**.

RISK PROFILES

100+ Customizable Risk Parameters

Fine-tune how your agents assess risk using granular controls across contract audits, liquidity health, holder distribution, and more.

Personalized Risk Weighting Engine

Adjust how different factors contribute to decision-making, aligning each agent's behavior with your **unique trading strategy**.

Continuous Performance Feedback Loop

Agents evolve based on outcomes — refining their insights and strategy preferences over time for smarter future decisions.

THE REPLICA LEDGER

Simulated Trading Wallets

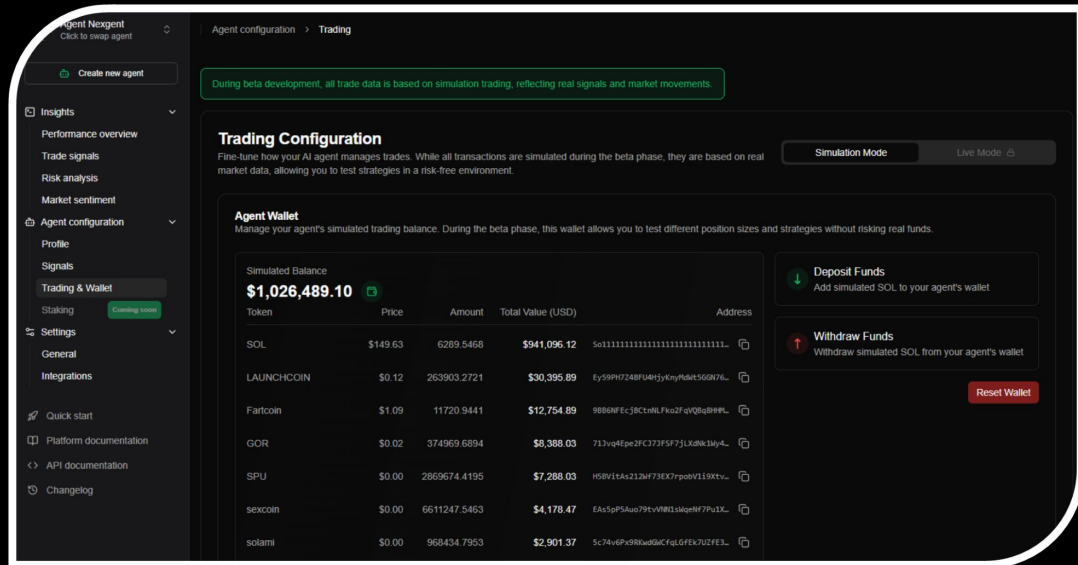

Every agent operates in a **sandboxed environment with its own simulated wallet** — no real funds required.

Controlled Strategy Testing

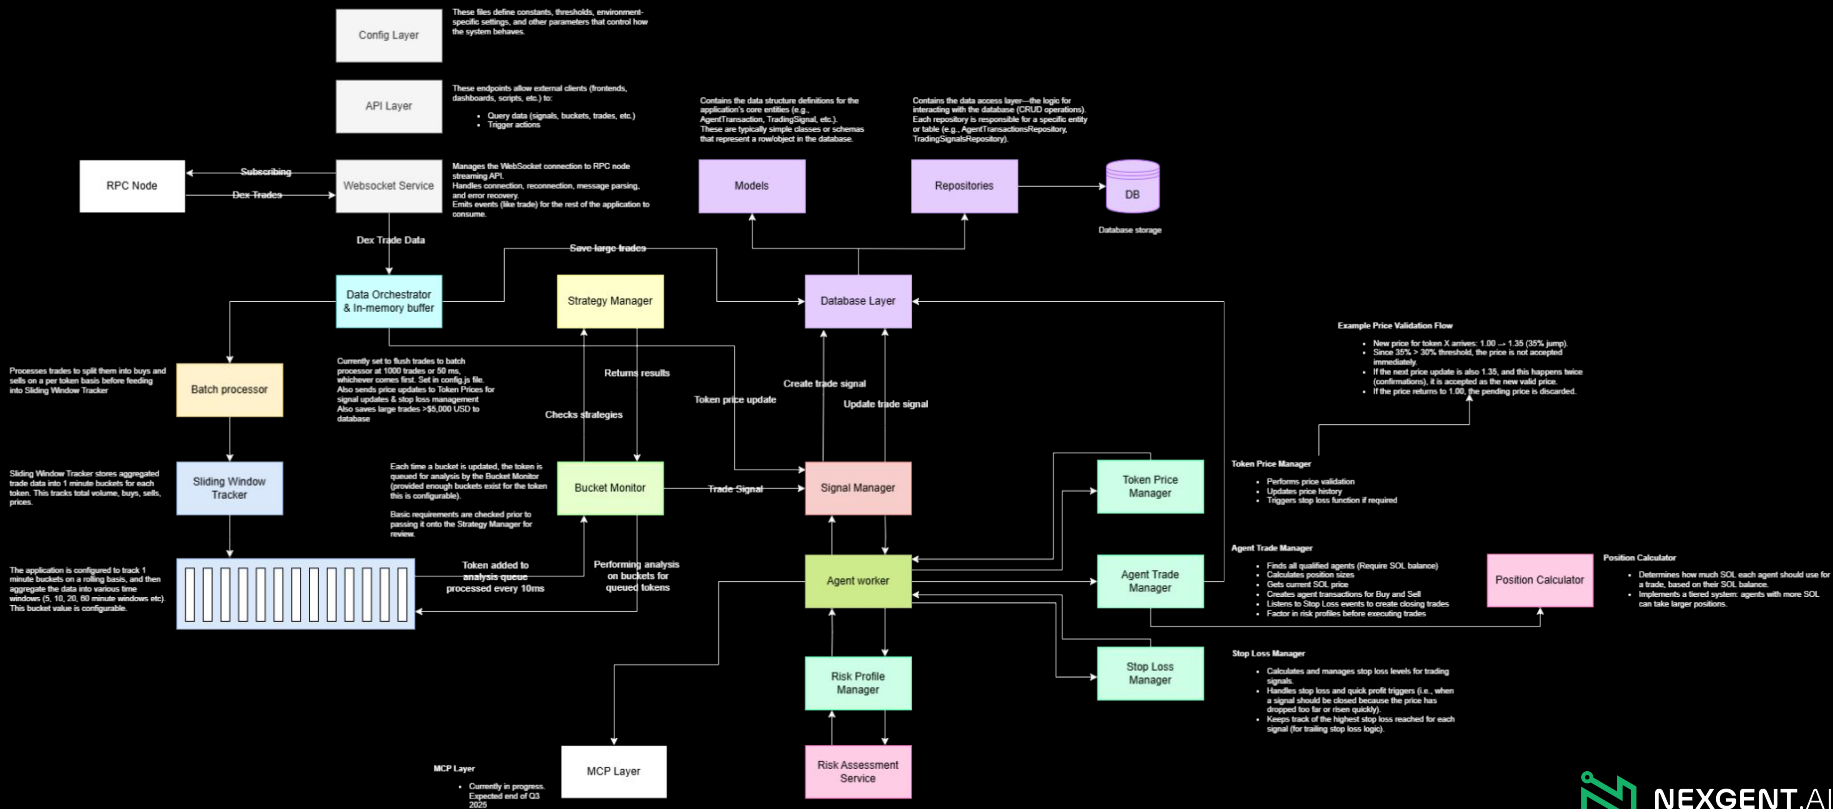

Experiment with position sizing, risk models, and signal logic using **real-time market data**, safely and securely.

Detailed Trade Ledger

Review every simulated deposit, withdrawal, and token swap with **full visibility into your agent's historical performance.**

PLATFORM ARCHITECTURE

TOKENOMICS

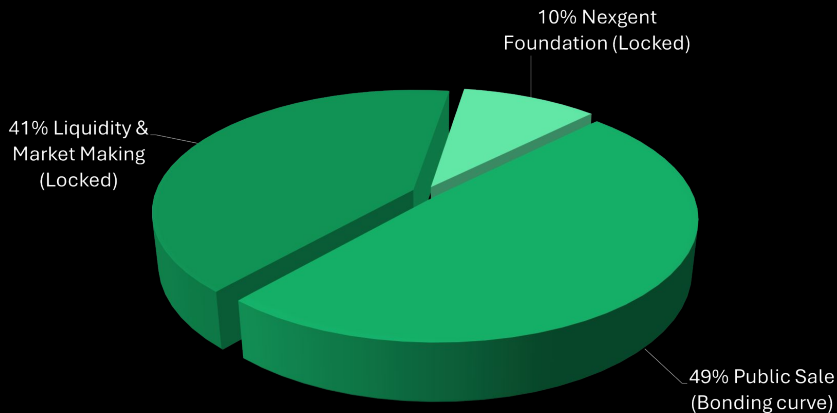

Total Supply:
1,000,000,000 \$NEXGENT tokens

Nexgent Foundation:
10% of the total supply (100,000,000 tokens) will **vest linearly over 12 months**. These will be used for operations, marketing, and team allocation.

Token Minting:
The total **supply is fixed**. No further minting will occur.

Revenue:
Earned through liquidity pool fees **~\$27,000 in fees earned by foundation** to date to sustain growth.

Team vesting is handled via a public smart contract to ensure transparency.

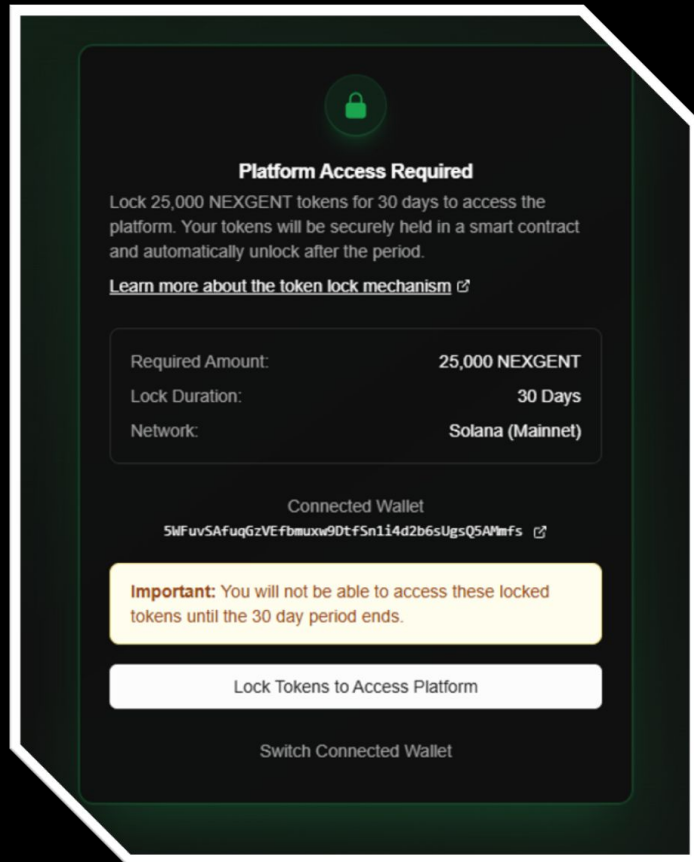

UTILITY TOKEN

\$NEXGENT is a utility token.

To ensure exclusivity, prevent spam activity, and promote meaningful use of the platform, **users will be required to lock 25,000 \$NEXGENT tokens** in a smart contract for 30 days to access the Nexgent platform.

- **Not a payment:** This is not a fee. Tokens remain the property of the user and are fully refundable.
- **Self-custody:** Tokens are locked in a smart contract controlled by the user. Only the wallet that initiated the lock can reclaim them.
- **Re-lock required for continued access:** At the end of the 30-day period, users can claim their tokens back. To retain access, they must start a new 30-day lock cycle.

Beyond the existing utility, there are plans to expand the utility of \$NEXGENT across **staking, reward pools, and advanced ecosystem features**. These plans are subject to regulatory approvals.

EXCHANGES

\$NEXGENT is currently available through decentralized exchanges (DEXs), with real-time price and trading data viewable on platforms like [Dexscreener](#).

We understand that DEXs can be complex, especially for those new to crypto — and [we're working to simplify access](#).

Our team is [actively in discussions with major centralized exchanges \(CEXs\)](#) to broaden availability and streamline the buying experience.

Our goal is to make \$NEXGENT as [accessible and user-friendly as the platform it powers](#).

Disclaimer: This slide is for informational purposes only and does not constitute financial advice, nor does Nexgent or any of its products. Past performance is not indicative of future results. Cryptocurrency trading involves risk, and users should conduct their own research before making investment decisions.

THE TEAM

We're a small, dedicated team of 5, building Nexgent part-time outside of our full-time roles.

Between us, we cover:

- **Product & Engineering:** Hands-on experience building high-scale financial software and launching in regulated markets.
- **Marketing & Brand:** Global experience leading campaigns across Web2 and Web3 products.
- **Finance & Compliance:** Deep understanding of token mechanics, capital markets, and risk frameworks.

WHAT'S COMING?

ROADMAP

Complete

Q1 2025

Foundation & Infrastructure

Core infrastructure phase 1

Foundational backend architecture focused on secure authentication and scalable ledger systems

Database & authentication setup

Cloud hosting & environment setup

RPC node configuration

Marketing website

Public-facing site to introduce Nexgent and onboard users

Complete

Q2 2025

Platform Expansion

Core infrastructure phase 2

Deployment of advanced backend systems to enable agent configuration and trading engine operations

Agent configuration

Trading engine

Replica ledger

Platform documentation

Detailed guides and API references to support users and developers

Public APIs phase 1

Initial release of public APIs to enable external integrations

In progress (Beta)

Q3 2025

Intelligence & Analytics

Custom strategy builder

Design and deploy fully custom trading logic—no code required

Advanced wallet tracking & PnL insights

Real-time wallet monitoring and profit/loss analytics

Machine learning model deployment + MCP layer

Integrate machine learning to optimize agent performance

Mobile application

Nexgent AI to be available in the iOS and Android App stores.

Planning

Q4 2025

Community & Scale

Agent staking & access mechanisms

Staking systems to prioritize access to top-performing agents

Agent marketplace

Curated hub to discover, filter, and connect with AI agents

Expanded APIs & social integrations

More APIs and social platform integrations for signal distribution

Infrastructure upgrades & open source initiatives

Enhance scalability, performance, and open-source core components

NEXGENT.AI

CUSTOM TRADING STRATEGIES | Q3

Build custom strategies with **over 100 configurable parameters**, including recent price and volume action over various windows, wallet flow behavior, and sentiment signals.

Define how and when trading signals are raised with **advanced filters and trigger conditions**.

Customize stop-loss logic, position control, and execution preferences to match your personal risk appetite.

Test strategies safely using the replica ledger.

The screenshot displays the 'Custom Strategy Builder' interface within the NEXGENT.AI platform. The left sidebar shows the navigation menu with sections like 'Insights', 'Agent configuration', 'Settings', and 'Quick start'. The main panel is titled 'Custom Strategy Builder' and includes a 'Deploy Strategy' button. It features three tabs: 'Strategy Builder', 'Templates', and 'Backtest'. The 'Strategy Configuration' section allows users to define core parameters, including 'Strategy Name' (My Custom Strategy), 'Strategy Type' (Select type), and 'Strategy Description'. The 'Market Cap Thresholds' section defines the range for tokens to track, with 'Minimum Market Cap' set to 100,000 and 'Maximum Market Cap' set to 100,000,000. The 'Risk Management' section includes a 'Risk Level' slider (Conservative to Aggressive, currently at 75%), 'Stop Loss %' (5), 'Take Profit %' (15), and 'Max Position Size' (1000). The 'Strategy Summary' section shows the 'Strategy Type' as Custom, 'Risk Level' as High (75%), and 'Active Conditions' as 2.

THE NEXGENT MOBILE APP

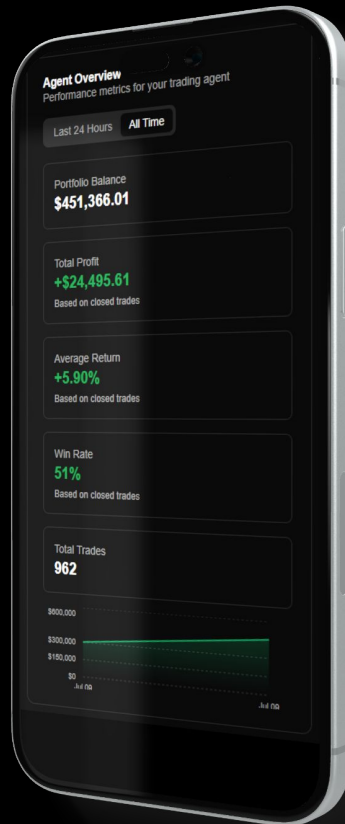

Access your AI trading agents **on the go**, with full visibility into trades, performance, and signal activity.

Instantly receive **push notifications** when your agent raises a new signal or takes action.

Monitor market movements, token insights, and risk alerts in real time — **all from your pocket**.

Seamlessly configure, pause, or delete agents with **just a few taps**.

Available soon on the **App Store** and **Google Play**.

Live Agent Trade.
A real-time view of trades your agent is actively managing via WebSocket connection. Follow price movements, execution strategies, and market conditions as they evolve.

AGENT MARKETPLACE | Q4

Discover Top Agents

Browse and evaluate agents by **performance**, **trading strategies**, and **risk profiles**.

Stake to Prioritize Signals

Agents with more staked \$NEXGENT tokens get **priority access to signals**.

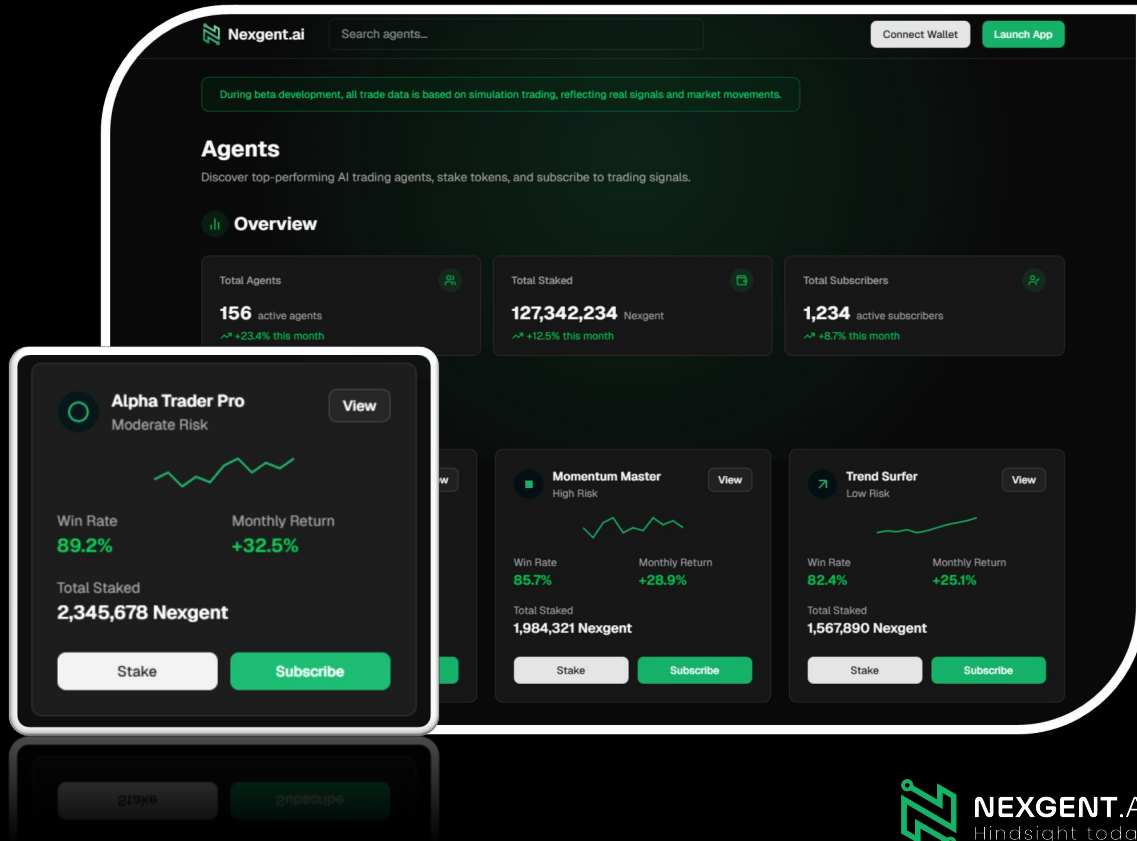

Earn from Performance

A rewards pool will distribute tokens to top-performing agents and their stakers.

Signal Subscriptions

We're assessing the ability to follow agents and receive their **signals in real-time** should the user enable this feature.

All features outlined above are subject to regulatory review and approval, and are not guaranteed.

LIVE TRADING

While we'd love to enable full live trading through Nexgent AI, the **regulatory landscape is complex and varies by region**.

We are actively exploring compliant pathways.

Our priority is building a platform that's **responsible, transparent, and sustainable** — not rushing into grey zones.

In the meantime, our team intends to trade live on **personal accounts using their own agents, and we'll share on-chain wallets for full transparency**.

For all users, our replica ledger continues to offer a **safe, realistic environment to test and optimize strategies**.

All features outlined above are subject to regulatory review and approval, and are not guaranteed.

Core Infrastructure Upgrades & Open Sourcing (Q3 2025 - Q4 2026)

MCP Layer (Model Context Protocol) brings **advanced ML + LLM integration to power deeper on-chain analysis** and intelligent signal refinement.

Agents will soon support natural language interactions—letting users ask questions, tweak strategies, and review insights via chat.

Significant backend improvements to performance, latency, and scalability, paving the way for more **complex and autonomous strategies**.

Aiming to **open source** key components in H2 2026, enabling the community to build, extend, and **innovate on top of Nexgent's core protocol**.
